The all-compatible ACS580MV general purpose drive

The ACS580MV is part of the all-compatible ABB drive portfolio. It turns complicated to simple while ensuring highest reliability.

The drive controls a wide range of applications in different industries, and yet it requires very little setting up or commissioning. All the essential features are built-in as standard, which reduces the need for additional hardware and simplifies drive selection. The drive is easy-to-use in terms of controlling pumps, fans, and many other applications.

What if you have other requirements? You can select another member of the all-compatible drives portfolio. The drives share the same user interfaces and options, enabling you to use the knowledge you have gained with the ACS580MV drives. You increasingly keep saving time, and saving time in business means saving money.

Switch on simplicity without trading off efficiency

The drive is easy to select, install and use. Built-in assistant functionality is helpful to easily operate and maintain the drive.

Simple to operate, safe to use

The standardized interface for fieldbus, I/O's, cable entry and breaker control in combination with emergency off and emergency stop functions ensure easy and safe drive operation.

Wireless enabled with Bluetooth panel

Control panel's assistants help to set up the drive quickly and effectively, You could easily monitor your drive operation status and fault diagnostic from your mobile devices.

Boosting energy efficiency

Energy efficiency information helps you monitor and save the energy used in your process. Energy optimizer function allows further energy savings.

After commissioning, the next time you will remember you own the drive is when you take a look at your new, lower energy bill.

The image shows a large, grey industrial drive unit with three vertical sections. The top right section is labeled "ACS580MV". A cooling fan is visible on top of the unit. Three red lines with circular endpoints point from the drive unit to three separate callout boxes on the right side of the page. The first callout points to a computer monitor displaying a software interface. The second callout points to a small, white electronic module. The third callout points to a horizontal line.

- Monitoring and maintenance tool**
Drive composer PC tool for configuration, monitoring and process tuning. PC tool is connected to the drive's control panel via USB or Ethernet interface.
- Communication with all major automation networks**
Fieldbus adapters enable connectivity with all major industrial automation networks.
- Performance-based reliability**
Advanced diagnostics and warning system enables users to effectively analyze and resolve issues. The power loss ride-through function of the ACS580MV drive ensure reliable and trouble free operation as well as high robustness against weak network performance.

The reliable drive for a broad range of applications

The cabinet-built ACS580MV general purpose drive is designed to control pumps, fans, and many other applications like compressors as well as for process control in different industries. The drive is equipped with various features that simplify ordering and delivery, and reduces commissioning costs since everything is provided in a compact package.

All essential features for reliable operations

The drive features a new generation of cascaded h-bridge technology which, together with the drive's design, provides superior mitigation of harmonics in a compact design. Other built-in features like power loss ride-through ensures reliable and trouble free operation as well as high robustness against weak network performance. Features like IP42, redundant cooling fans and an advanced preventive warning system ensure highest reliability even in harsh industrial environments. The plug-in fieldbus adapter modules enable connectivity with all major automation systems. Other options like manual bypass provide high quality fit-to-purpose feature for ACS580MV targeted industries and applications. The drive and all options have coated boards as standard improving durability in rough surrounding conditions.

Easy to use control panel and PC tool

The control panel and PC tool provide effective drive operation, monitoring and maintenance. The control panel's straightforward settings menu and many built-in assistants ensure easy usage while the Drive composer PC tool offers extensive drive monitoring and process tuning capabilities.

Boosting energy efficiency

The built-in energy efficiency calculators, including used and saved kWh, CO2 reduction and money saved, help users finetune processes to ensure optimal energy use.

ACS580MV goes digital

With ACS580MV control panel, you could connect your device with your mobile sets and simplify the troubleshooting and maintenance task.

Remote assistance and condition monitoring is also featured with ACS580MV. Customer could get rapid response from ABB expert in case of site issue and even preventive failure alert.

Shared features of the ABB all-compatible drives portfolio

Same user interface

The drives follow the same operation logic and yet, there is an optimal drive from the smallest water pump to the biggest cement kiln, and everything in the between. When you have learned to use one drive, it is easy to use other drives in the portfolio.

Same PC tools

Free Drive Composer entry available at www.abb.com.

The same parameter structure makes the all-compatible platform easy to use.

Simple connectivity

- The ACS580MV supports F-series fieldbus adapters used in the ABB all-compatible platform
- Mobile phone connectivity via the Bluetooth assistant control panel
- Fieldbus settings are made easy with the redesigned simple settings menu

How to select a drive

It is very easy to select the right drive.

1 Start with identifying your motor voltage.

This tells you what rating table to use. The ACS580MV currently supports voltage from 3.3kV to 11kV. See page 12-15.

2 Choose your motor's nominal power rating from the ratings table on See page 12-15.

Select your drive's ordering code from the rating table based on your motor's nominal power rating.

Flexible connectivity to automation networks

A Fieldbus enables communication between drives and PLC systems, I/O devices and the process. Fieldbus communication reduces wiring costs when compared with traditional hard-wired input/output connections. Fieldbus systems also offer the ability to gather large amounts of data.

The general purpose drives are compatible with a wide range of fieldbus protocols. The optional plug-in fieldbus adapter modules can easily be mounted inside the drive.

The benefits of fieldbus communication are described below:

- Drive monitoring**
A set of drive parameters and/or actual signals, such as torque, speed, current, etc., can be selected for cyclic data transfer providing fast data access.
- Drive diagnostics**
Accurate and reliable diagnostic information can be obtained through the alarm, limit and fault words, giving easy interfacing with plantwide HMI's.

Cabling
Substituting the large amount of conventional drive control cabling and wiring with a single cable reduces costs and increases system reliability and flexibility.

Design
The use of fieldbus control reduces engineering time at installation due to the modular structure of the hardware and firmware and the simplicity of the connections to the drives.

Universal communication with ABB Fieldbus adapters
The ACS580M supports the following fieldbus protocols:

Fieldbus adapter module
Fieldbus (or any protocol) to (D)evices or (F)ieldbus adapter

Fieldbus adapter module	Option
PROFIBUS-DP adapter	PH47-01
Modbus adapter	PH47-02
RS-485	PH47-03
Modbus/RTU	PH47-04
Modbus	PH47-05
Modbus/ASCII	PH47-06
Modbus	PH47-07

Technical data

Mains connection	
Voltage	3.3 to 13.8 kV $\pm 10\%$, (-25% with reduced power)
Supply frequency	50/60 Hz $\pm 5\%$
Power factor	$\cos\phi \geq 0.96$
Drive system efficiency (at nominal power)	> 96% (Including transformer)
Motor connection	
Voltage	3.3 to 11 kV
Frequency	0 to 120 Hz output, up to 80 Hz nominal motor frequency
Power range	3.3 kV: up to 2000 kW / 4.16 kV: up to 2500 kW / 6 kV: up to 3550 kW / 6.3 kV: up to 3500 kW / 6.6 kV: up to 4000 kW 10 kV: up to 5600 kW / 10.5 kV: up to 6300 kW / 11 kV: up to 6300 kW
Motor control	Scalar and vector control
Torque control	Torque step rise time: < 10 ms with nominal torque, Non-linearity: $\pm 5\%$ with nominal torque
Speed control	Static accuracy: 20% of motor nominal slip Dynamic accuracy: 1% seconds with 100% torque step
Overload	110 % (1 min/10 min)
Maximum motor cable length	1000 m
Output current THD	< 2%

Standard interface and extensions for plug-in connectivity

The ACS580MV drives offer a wide range of standard interfaces. In addition, the drive has two option slots that can be used for extensions including fieldbus adapter modules and input/output extension modules. Predefined macros enable easy and fast configuration of customer I/O's. ACS580MV offers following 3 macros and configurations in standard which support most frequently used application requirements like sequential control for retrofit.

Central Controller

Default control connections for the factory macro

XPOW External power input

1	+24V _I	24 V DC, 2 A (internally used)
2	GND	

XAI Reference voltage and analog inputs

Standard software with versatile features

Commissioning faster than ever before

The DriveStartup tool has a clear, intuitive and visually advanced interface as well as different assistants to make the drive simple to set up. This saves on commissioning time.

Sophisticated process control

The ACS580MV drives offer sophisticated process control in scalar and vector control modes for induction motors. Many embedded protection and other features improve performance of the motor and process.

Flying start

Flying start is available for both scalar and vector control modes. The drive catches a running motor which is often required in applications with long freewheeling times, such as in fan applications.

Load profile

The load profile feature collects drive values such as current to a log. The log shows how the drive is operating and enables you to analyze and optimize the application.

PID built-in

Built-in and stand-alone PID makes the ACS580MV a selfgoverning unit that requires no external logic input from the control room, but requires only an external process measurement.

Optimizing energy use

The ACS580MV drives come with features that help you save and manage energy. You can monitor the hourly, daily and cumulative energy consumption via kWh counters. When the drive replaces a direct-online control, you can follow the saved energy, CO2 emissions or money, and see how fast the drive brings you a return on investment.

Easy diagnostics for trouble-free operation

The control panel's and Drive composer PC tool's diagnostics menu enables you to effectively analyze and resolve issues. You can quickly analyze why the drive is performing as it is; running, stopped or running at the present speed. Active faults, warnings and event logs are shown in the menu. The menu shows if there are any active limitations to the drive operation and gives instructions on how to resolve them. The entry level drive composer PC tool is available for free via the ABB website.

Bluetooth connectivity provided by ACS580MV control panel

Smooth navigation and process tuning

The control panel is equipped with context-sensitive soft keys and four-direction navigation enabling you to quickly browse and adjust the drive settings. Many flexible data visualizations including bar charts, histograms and trend graphs help you analyze the process. With the panel's text editor, you can for example add information to I/O signals or customize fault and warning messages. You can also label the drive with a unique name.

Bluetooth control panel

The standardized bluetooth panel for ACS580MV enables customers to monitor the drive operation status and fault diagnostics.

Easy drive maintenance

Powerful backup and restore functions (with name, date and content) are supported as well as different language versions. Faults or warnings are quickly resolved as the help key provides context sensitive guidance and troubleshooting instructions.

Bluetooth control panel

PC tools for drive commissioning and process tuning capabilities

The free version of the Drive composer PC tool provides monitoring and maintenance capabilities, while the professional version provides additional features such as custom parameter windows, control diagrams of the drive's configuration and improved monitoring and diagnostics.

The Drive composer tool is connected to the drive using the USB connection on the assistant control panel or an Ethernet connection on the drive. All drive information such as parameter loggers, faults, backups and event lists are gathered into a support diagnostics file. This provides faster fault tracking, shortens downtime and reduces operational and maintenance costs.

Drive composer pro offers extended functionality

Drive composer pro provides the same standard functionality as the free version, including parameter settings, downloading and uploading files and search parameters. Advanced features such as graphical control diagrams and various displays are also available. The control diagrams save users from browsing long lists of parameters and help to set the drive's logic quickly and easily.

The tool has fast monitoring capabilities of multiple signals from several drives in a PC tool network. Full backup and restore functions are also included.

DriveStartup ensures fast and high quality commissioning

For the effortless drive commissioning the DriveStartup tool is applied. DriveStartup guides step by step through the complete commissioning including reporting and ensures highest quality, reduced commissioning time and therefore reduced costs.

Flexible connectivity to automation networks

A fieldbus enables communication between drives and PLC systems, I/O devices and the process. Fieldbus communication reduces wiring costs when compared with traditional hard wired input/output connections. Fieldbus systems also offer the ability to gather large amounts of data.

The general purpose drives are compatible with a wide range of fieldbus protocols. The optional plug-in fieldbus adapter modules can easily be mounted inside the drive.

The benefits of fieldbus communication are described below.

Drive monitoring

A set of drive parameters and/or actual signals, such as torque, speed, current, etc., can be selected for cyclic data transfer, providing fast data access.

Drive diagnostics

Accurate and reliable diagnostic information can be obtained through the alarm, limit and fault words, giving easy interfacing with plantwide HMIs.

Cabling

Substituting the large amount of conventional drive control cabling and wiring with a single cable reduces costs and increases system reliability and flexibility.

Design

The use of fieldbus control reduces engineering time at installation due to the modular structure of the hardware and software and the simplicity of the connections to the drives.

Universal communication with ABB fieldbus adapters

The ACS580MV supports the following fieldbus protocols:

Fieldbus adapter modules

Fieldbus (2 slot available for I/O extension or fieldbus adapter)

Fieldbus Adapter	Option
PROFIBUS-DP adapter	FPBA-01
Modbus adapter	FSCA-01
EIP	FEIP-21
Modbus/TCP	FMBT-21
PROFINET	FPNO-21
DeviceNet	FDNA-01

Input/output extension modules for increased connectivity

Standard input and output can be extended by using optional analog and digital input/output extension modules. The modules are easily installed in the extension slots located on the main controller.

Typical functions like motor fan on/off can be easily configured by using FIO-11 and FIO-01 modules.

Analog and digital input/output extension modules

Connections	Options
4 x DI/O, 2 x RO	FIO-01
3 x AI (mA/V), 1 x AO (mA), 2 x DI/O	FIO-11
2 x AI (mA/V), 2 x AO (mA)	FAIO-01

Cabinet options

The ACS580MV is available with IP42 protection class, thus ensuring a reliable operation of the drive even under harsh environmental conditions.

As an option, the ACS580MV can be equipped with a cabinet heater that prevents humidity condensation inside the cabinet when the drive is not powered such as during plant maintenance or drive shut down time.

The optional low power auxiliary supply package does not require 380 V power supply and is the ideal solution in order to ensure safe line control power supply using customer UPS. This option is also available with a built-in UPS which is recommended in case of an unreliable auxiliary supply.

Cabinet option	Description
Converter cabinet and motor space heater	Additional external 220–240V power supply required
Low power aux supply package	External single phase supply 100–240 V AC or 90-350 V DC, 3 phase fan supply from internal main transformer. Ideal for safe line control power supply.
Low power aux supply package + int. UPS	External single phase supply 100–240 V AC or 90-350 V DC and internal UPS (~15 min), 3 phase fan supply from internal main transformer. Ideal for high availability in case of unreliable aux. supply.

Cooling

The ACS580MV is fitted with cooling air fans. The cooling air must be free from corrosive materials, humidity and dust. The air temperature should not be above the maximum ambient temperature of 40 °C (50 °C with derating). Before installation please check the information in the technical datasheets.

Optional redundant cooling fans ensure an automatic switch to an additional fan in case of

cooling problems and guarantee highest reliability in the process operation. Furthermore, a special interface for the fan box is optional available in order to attach an air duct to the drive cabinet.

Cooling option

Redundant cooling fans
Fanbox for air duct connection

Safety features

The integrated emergency off and emergency stop function safety for machine operators and is optionally available with SIL_{CL3}/PLe certification.

Safety feature

Emergency Stop, Category 0 with opening main contactor/breaker (SIL_{CL3}/PLe)

Manual bypass feature

Enable highest availability of any application that operate direct-on-line (DOL). Risk management for customer retrofitting existing DOL motors with drives.

Specialities

Special environmental conditions and applications require a need-oriented selection and configuration of the drives. The ACS580MV offers a wide range of specialties which can be selected and might determine derating of the drive.

Different supply main voltage than drive output voltage is optionally available and covered by

integrated transformer. Extreme environmental conditions such as extended ambient temperature or a high altitude need special consideration when configuring the drive and may have an impact on the cabinet size.

ABB Ability™ Digital Powertrain

Condition monitoring for drives

Accurate, real-time information about powertrain events. When you have the facts, you can make the right decisions.

Condition Monitoring gives you fact-based insight into your powertrain assets, such as drives and motors, via KPIs and signal data, to identify irregularities before they become problems. This helps you make proactive decisions, built on real-time information – and saves you money!

The service can be tailored to fit your needs

Our standard package gives you industry leading monitoring capabilities – whether you want to view the drive status through ABB's Internet portal or integrate this data with your existing monitoring systems.

The standard package includes the following services:

- Condition Monitoring
- Alarm Management
- Asset Health
- Team Support
- Backup Management

The standard package can be supplemented with optional services:

- Condition-Based Maintenance
- Offline Data Collection
- Expert Reports
- Remote Assistance
- Condition monitoring of your entire powertrain

Solid fact-based decision making

Get the facts, and the history, to help run your operations better and more safely.

Always stay one step ahead of problems

Recognize early signs of possible failures and assess the risks, before they turn into serious operational issues.

Find the root cause of process issues

Remotely access data from ABB drives built-in sensors to track the cause of problems. Get back to smooth operation quickly with data back-ups.

Remotely analyze and optimize drives

Get critical drive information anywhere anytime – even in difficult to access sites, or when a site visit is impossible.

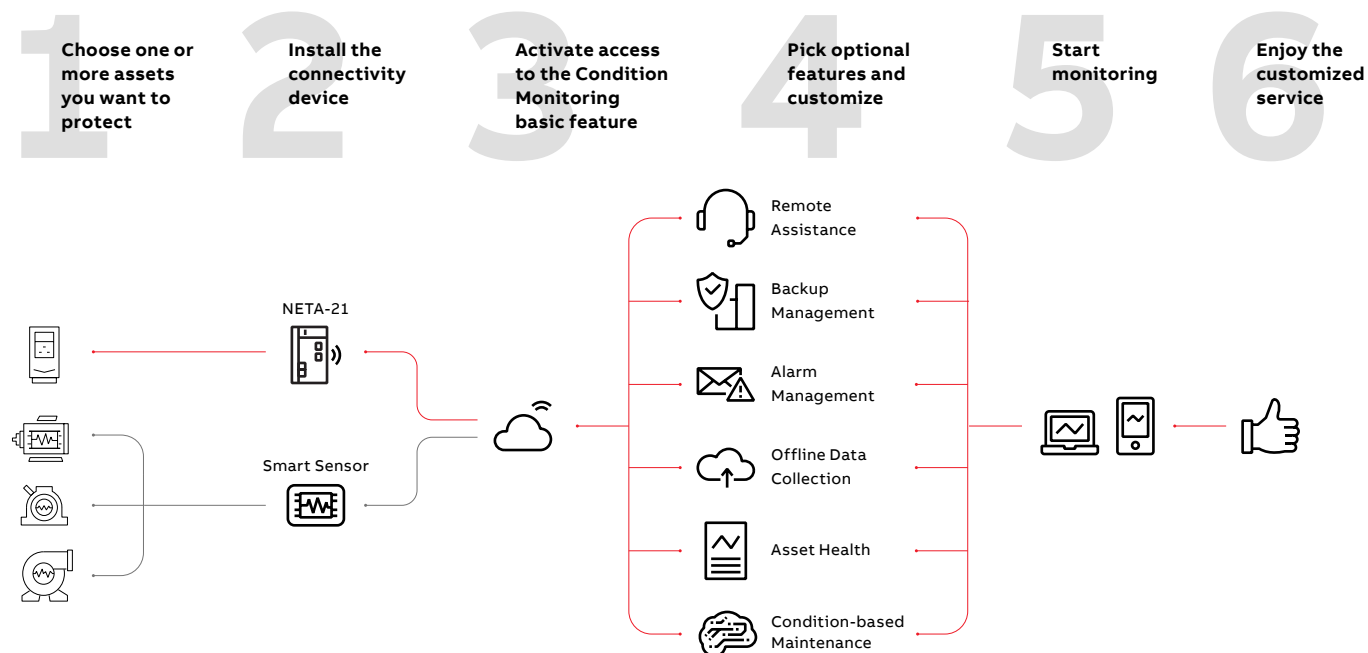

NETA-21

NETA-21 connects the drive to the cloud via the Internet or local Ethernet network.

- The module comes with a built-in web server and requires no Flash/Java plugins
- In the absence of a customer local area network, it can be connected via a mobile network router (either Ethernet or USB network adapter)
- One module can be connected to several drives at the same time

NETA-21	Ordering code	Description
	3AUA0000094517	2 x panel bus interface
		max. 9 drives
		2 x Ethernet interface
		SD memory card

Customers can configure powertrains and customize the digital service plan

We keep your world turning

Whatever your needs are, we offer the most extensive service offering for drives, motors and generators from spare parts and technical support to cloud-based condition monitoring solutions to keep your equipment running.

The global ABB service units complemented by external Value Providers form a service network on your doorstep. Maximize performance, uptime and efficiency throughout the life cycle of your assets.

With you every step of the way

Even before you buy a generator, drive, motor, bearing or softstarter, ABB's experts are on hand to offer technical advice from dimensioning through to potential energy saving.

When you've decided on the right product, ABB and its global network of Value Providers can help with installation and commissioning. They are also on hand to support you throughout the operation and maintenance phases of the products life cycle, providing maintenance programs tailored to your facility's needs.

ABB will ensure you are aware of any service opportunities. If you've registered your drives and motors with ABB, then its engineers will proactively contact you advising on your most effective service options. All of which helps maximize performance, uptime and efficiency throughout the lifetime of your powertrain.

Replacements
Fast and efficient replacement services to minimize production downtime.

End-of-life services
Responsible dismantling, recycling and reusing of products, according to local laws and industrial standards.

Maintenance
Systematic and organized maintenance and support over the life cycle of your assets.

Advanced services

Gain the unique ABB Ability™ digital advantage through data collection and analytics with advanced services.

Extensions, upgrades & retrofits

Up-to-date systems and devices with the best possible performance level.

Engineering & consulting

Ways to identify and improve the reliability, usability, maintainability and safety of your production processes.

Spares & consumables

Authentic, high-quality ABB spares and consumables with quick delivery.

Technical support & repairs

Quick and accurate response during emergencies and efficient support during planned production breaks.

Installation & commissioning

Highly-trained and reliable installation and commissioning experts at your service.

Training

Comprehensive and professional training either at ABB premises or your own.

Agreements

Comprehensive bundling of relevant services into one contract to suit your needs.

Global service network 24/7

“I need operational excellence, rapid response, improved performance and life cycle management.”

ABB Drives Life Cycle Management

A life time of peak performance

You're in control of every life cycle phase of your drives. At the heart of drive services is a four-phase product life cycle management model. This model defines the services recommended and available throughout drives lifespan.

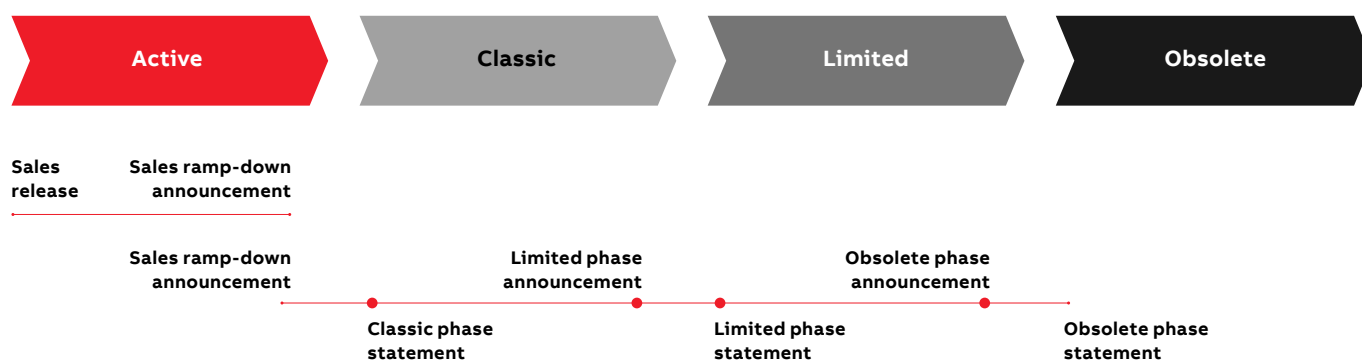

Now it's easy for you to see the exact service and maintenance available for your drives.

Keeping you informed throughout the life cycle

We notify you every step of the way using life cycle status statements and announcements.

Your benefit is clear information about your drives' status and precise services available. It helps you plan the preferred service actions ahead of time and make sure that continuous support is always available.

Sales release

Details about product portfolio and release schedule.

Sales ramp down announcement

Last time buy and last deliveries dates, informed well in advance.

Life cycle phase change announcement

Early information about the upcoming life cycle phase change and affects on the service availability. Informed well in advance, minimum six months prior to the change.

Life cycle phase statement

Information about the current life cycle status, product and services availability and recommended actions. Plan for the next life cycle phase transition.
